

Car Sales Data Visualization – Insights Summary

This dashboard analyzes a dataset of 50,000 car sales records to identify key trends in pricing, mileage, manufacturers, and fuel types. The goal was not only to visualize the data but also to tell a story that highlights patterns and business insights.

◆ Key Findings

1. Manufacturer Trends

Ford has the highest share of cars in the dataset, followed by VW and Toyota.

Porsche represents a smaller segment but commands the highest average prices.

2. Fuel Type Distribution

Petrol cars dominate the dataset (over 50% of records).

Hybrid cars, though fewer, are priced competitively in recent years.

Diesel cars show higher mileage compared to petrol, indicating longer usage.

3. Price vs. Year of Manufacture

Cars manufactured after 2015 show a steeper price increase, reflecting newer models and luxury vehicles.

Older cars (pre-2000) are priced much lower, often below ₹5,000 (budget category).

4. Mileage Impact

A clear negative correlation exists: higher mileage cars are priced lower.

Low-mileage vehicles, even from older years, maintain better market value.

5. Price Segmentation

Budget Cars (< ₹5,000): Mostly older models with high mileage.

Mid-Range Cars (₹5,000–₹15,000): Dominated by Toyota and VW.

Premium Cars (> ₹15,000): Strong presence of Porsche and newer Ford models.

◆ Business Insights

Customers seeking reliability at low cost tend to prefer Ford and Toyota cars.

Luxury buyers focus on Porsche, showing clear market segmentation.

Fuel preference is shifting slowly toward Hybrid options, a potential growth segment.
